

# Surgical Procedure Protocol Flowchart

The surgical procedure protocol ensures that surgical interventions are conducted safely and efficiently. This workflow details the key steps, from pre-surgical preparation to post-surgical recovery and discharge.

## Step-by-Step Process:

### - Pre-Surgical Preparation

The patient undergoes preoperative evaluations, including lab tests and imaging scans.

### - Administer Anesthesia

The anesthesiologist administers anesthesia to ensure patient comfort during the procedure.

### - Perform Surgery

The surgical team carries out the procedure following medical guidelines.

### - Monitor Patient Recovery

After the operation, the patient is closely monitored in the recovery unit for any complications.

### - Discharge Patient

Once stable, the patient is discharged with post-surgical care instructions.

### - Procedure Completed

The surgical process concludes, and follow-up appointments are scheduled as needed.
