

Patient Admission Process Flowchart

The patient admission process is an essential step in healthcare facilities, ensuring that patients receive timely and appropriate care. This structured workflow involves initial check-in, triage assessment, and hospital admission, helping to prioritize patients based on the severity of their condition.

Step-by-Step Process:

- Patient Check-in

The patient arrives at the hospital and checks in at the registration desk, providing identification and medical history.

- Triage & Assessment

A nurse conducts an initial assessment, taking vital signs and evaluating the patient's condition.

- Emergency Case?

If the patient is in critical condition, they are admitted immediately for emergency care.

- Admit to Hospital

If hospitalization is required, the patient is assigned a hospital bed and moved to the appropriate department.

- Provide Initial Treatment

If the patient does not require hospitalization, initial treatment is administered, and further instructions are given.

- Admission Completed

The admission process concludes with all necessary medical steps taken.
