

# Course Curriculum Development Flowchart

Course curriculum development is an essential academic process that ensures courses are structured, comprehensive, and aligned with educational standards. This workflow outlines the approval process for developing new courses and revising existing curricula.

## Step-by-Step Process:

### - Submit Course Proposal

A faculty member submits a proposal for a new course or curriculum revision.

### - Department Review

The department committee reviews the proposal for relevance, feasibility, and alignment with academic goals.

### - Proposal Approved?

If the proposal meets academic standards, it advances to the next stage; otherwise, revisions are required.

### - Revise Proposal

If necessary, the faculty member makes modifications based on feedback before resubmitting.

### - Approval by Academic Committee

The proposal is formally reviewed and approved by the institution's academic committee.

### - Finalize Curriculum

After final approval, the course syllabus and curriculum materials are finalized.

### - Curriculum Published

The course is officially added to the academic catalog and made available for students.
